🚀 Step-by-Step Guide to Run AegisLibrary!

Step 1: Install Python (The Engine)

1. Go to python.org.
2. Click the big yellow **"Download Python 3.xx.x"** button.
3. **IMPORTANT:** When you run the installer, look for a checkbox at the bottom that says **"Add Python to PATH"**.
    - **YOU MUST CHECK THIS BOX.** If you don't, nothing will work.
4. Click "Install Now" and wait for it to finish.

Step 2: Install the Security Libraries

1. Open your **Command Prompt** (Type cmd in the Windows Search Bar).
2. Type this exact line and press Enter:

   pip install flask werkzeug
3. Wait until it says "Successfully installed."

Step 3: Arrange Your Files (Very Important!)

Flask needs files in specific folders. Ensure your folder looks exactly like this:

- 📁 **LibrarySystem** (Main Folder)
    - 📄 app.py
    - 📄 init_db.py
    - 📄 schema.sql
    - 📁 **static** (Create this folder)
        - 📄 style.css
    - 📁 **templates** (Create this folder)
        - 📄 *Put all 10+ HTML files here (login, signup, dashboard, admin, etc.)*

Step 4: Create the Database

Before you can log in, you need to build the database.

1. In your **Command Prompt**, move into your folder. Type cd followed by a space, then drag your folder into the window:
   cd C:\Users\YourName\Desktop\LibrarySystem
2. Press Enter.
3. Type this line to build the database:

   python init_db.py
4. You should now see a file called **library.db** in your folder.

Step 5: Start the Website

1. In the same Command Prompt window, type:

   python app.py
2. The window will show: * Running on http://127.0.0.1:5000
3. **KEEP THIS BLACK WINDOW OPEN.** Do not close it, or the website will die.

Step 6: Open the Browser

1. Open Chrome or Edge.
2. Type this in the address bar: http://127.0.0.1:5000
3. You will see your **AegisLibrary Dashboard**.

🔑 **How to Log In & Use the System**

1. Logging in as Admin:

- Click **Login**.
- **Username:** admin
- **Password:** admin123
- **The MFA Code:** Look at the **Black Command Prompt window**. It will print a box saying: MFA CODE FOR admin: XXXXXX. Type that number into the website.

2. Forgot Password:

- Click **Forgot Password** on the login page.
- Enter admin@library.com.
- Check the **Black Command Prompt window** for the "Password Reset OTP".

Troubleshooting (If it fails)

- **"Database is locked":** Close your DB Browser for SQLite and restart app.py.
- **"Template Not Found":** Make sure your HTML files are inside the folder named templates.
- **"Command not found":** This means you didn't check the "Add to PATH" box in Step 1. Re-install Python!
